inventory solutions

WAREHOUSE MANAGEMENT SYSTEMS
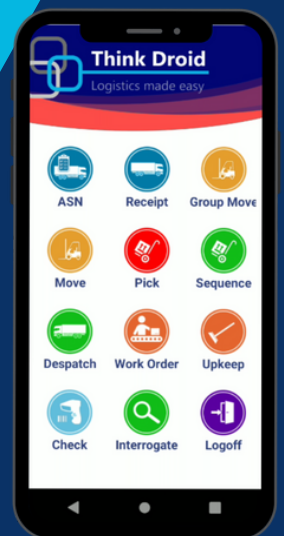

DESIGNED BY EXPERTS FOR PROFESSIONALS

Who are THINK Inventory Solutions?

THINK Inventory Solutions are one of the UK's leading software houses specialising in Warehouse Management Systems (WMS). We have been in the software industry for over fifteen years and have over 100 years of warehouse management experience including leading one of the worlds biggest automotive tier one suppliers at GM level.

You can trust in us to help you setup, organise, and maintain your inventory. Our Warehouse Management System is created from the real world experiences of industry experts.

THINK Inventory Solutions can help you;

- Setup, organise, and align your processes
- Reduce your costs
- Increase inventory accuracy
- Provide real-time stock control
- Reduce paper based transactions
- Provide consultancy in all aspects of system & process design
- Align with your android devices

Implementing a WMS system should not mean an upheaval on time or costs. THINK's wealth of industry experience with a deep routed industry skill set means we can work with your business to provide the most intuitive WMS on the market. Get your staff trained and operational within 45 minutes - it really is that user friendly.

Core Modules

ASN – Advanced Shipping Notices
THINK WMS can receive and transmit ASN's in many formats including VDA, EDIFACT, xml and many more. Ensuring you and your business partners benefit from the latest in EDI standards.

Receiving
Our fully configurable receiving process provides full flexibility allowing you to tailor your processes to your requirements.

Stock Control and Visibility
Stock balances and status can be viewed at multiple levels and locations with a full history provided at handling unit level. Warehouse capacity reporting can be tailored to your individual requirements.

Demand Fulfillment
Managing customer requirements from multiple sources efficiently and effectively is pivotal to any WMS. Our WMS provides full visibility of the status of all requirements allowing the user to prioritise as and when required, with configurable pick options.

Despatching (Shipping)
Accuracy and efficiency are key drivers in any shipping process. THINK process templates offer full configuration options to meet all requirements.

Serial Tracking
Do you need to track inventory at component or package level? Do you supply safety critical products or have high warranty costs to be monitored. Our serial tracking module is packed with features that provide full traceability at unit level if required.

Traceabilty
Full traceability can be supported from individual unit level, if required, to handling unit and from receipt to despatch offering you full scope to meet your existing, and future, customer requirements.

Specialised Functionality
THINK have provided solutions across a wide range of industries and can offer functionality in electronic Kanban, work orders, automotive sequencing and many more.
